The equations below are a typeset version of the equations contained in the script 'Initialise.R', used to initialise and parametrise the model.

$$n_f = 50 \tag{1}$$

$$s^j = \frac{1}{n_f} \qquad \forall j \in n_f \tag{2}$$

$$k = 18000 \tag{3}$$

$$k^j = K s^j \qquad \forall j \in n_f \tag{4}$$

$$w = 1 \tag{5}$$

$$u = 0.8 \tag{6}$$

$$kappa = 0.25 \tag{7}$$

$$c = u\kappa k \tag{8}$$

$$\kappa_L = 0.065 \tag{9}$$

$$\Omega = 0.5 \tag{10}$$

$$\Omega_c^j = \Omega \qquad \forall j \in n_f \tag{11}$$

$$p_k = (1 + \Omega)w \tag{12}$$

$$K = kp_k \tag{13}$$

$$K^j = K s^j \qquad \forall j \in n_f \tag{14}$$

$$\delta = 0.015 \tag{15}$$

$$p_c^j = (1 + \Omega^j)w \qquad \forall j \in n_f \tag{16}$$

$$(17) \qquad i = \delta k$$

$$(18) \qquad W_k = wi$$

$$(19) \qquad y = c + i$$

$$(20) \qquad i^j = is_j \qquad \forall j \in n_f$$

$$(21) \qquad c_d = c$$

$$(22) \qquad c_d^j = c_d s^j \qquad \forall j \in n_f$$

$$(23) \qquad Y = c_d \overline{p_c} + ip_k$$

$$(24) \qquad C^j = s^j p_c^j c_d \qquad \forall j \in n_f$$

$$(25) \qquad N_c = c_d + \kappa_L \kappa k (1 - \delta)$$

$$(26) \qquad W_c = N_c w$$

$$(27) \qquad W_c^j = W_c s^j \qquad \forall j \in n_f$$

$$(28) \qquad CF^j = C^j - W_c^j \qquad \forall j \in n_f$$

$$(29) \qquad YD = c_d \overline{p_c}$$

$$(30) \qquad Lev = 0.6$$

$$(31) \qquad L = Lev * K$$

$$(32) \qquad L^j = Ls^j \qquad \forall j \in n_f$$

$$(33) \qquad r_0 = 0.0125$$

$$(34) \qquad \theta = \delta$$

$$(35) \qquad \gamma = 0.44$$
